

Poly Pools Australia - Pool Steps Installation Guide

Your Poly Pool Steps will come with six 10mm bolts, washers, nuts, and two flanges.

We recommend having two 10mm spanners to tighten the flanges and an cordless drill will be required to drill appropriate holes.

The Pool Steps are a Strict two-person lift, be sure to stretch before lifting the steps and to lift properly;

Your Pool Steps will come with poly flanges semi attached, we advise not tightening these until the steps are inside the pool.

Carefully lift and lower the steps into your Poly Pool roughly where you want them to sit.

Position the Pool steps in your Poly Pool and Secure the Flanges in an upright position.

Position the steps against the wall of the pool and mark where your holes will be drilled.

Poly Pools Australia - Pool Steps Installation Guide

Drill four holes into the wall of the pool where you made markings earlier, ensure this is above the water level.

Push supplied bolts through the new holes with the thread sticking out away from the water and do up nuts with washers.

Ensure all bolts are secure.

Your new Poly Poll Steps should now be firmly attached.
